

Police brutality of minority groups, especially the black community in America has led to protests and riots all over the world in 2020. This notebook uses the police brutality dataset and a population dataset for race in each state to compare the numbers and identify states where police killings happen more frequently to minorities. First the dataset is imported, next a pie chart to compare percentage of killings by race, third the population dataset is imported and a comparison of the pie chart with an equivalent pie chart for population percentage, and finally a graph depicting the police killings per 100,000 for each demographic.

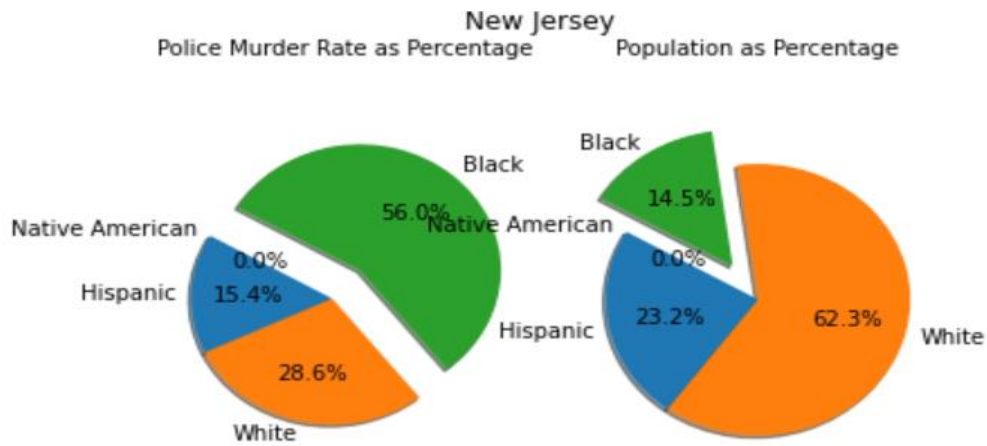

Results:

Police killings vs race percentage, ex: New York

Police killing rate as percentage vs population:

Police killings by race per 100000 individuals:
